

deep treatment

dermalogica[®]
dermalogica.com/learnproskin

benefits: intensifies treatment results with serums and masques to treat various skin conditions

✓ key steps

1. Apply prescribed IonActive™ Serum
2. Follow with application of prescribed professional masque
3. Remove with warm steam towel

step-by-step instructions:

1. Apply prescribed IonActive™ Serum to client's skin.
2. Follow with prescribed professional masque over IonActive™ Serum.
3. Allow products to process and penetrate on client's skin.
4. Remove excess product with warm steam towel or sponges.

tips:

- You may use cool globes or warm stones over prescribed products to enhance treatment.
- You may perform a Touch Therapy such as Stress Relief Scalp or Targeted Neck and Shoulder during Deep Treatment.

galvanic iontophoresis

benefit: increases product penetration to boost efficacy of products

✓ key steps

1. Cover negative electrode with damp sponge or gauze and connect to client
2. Attach the working positive electrode
3. Apply prescribed IonActive™ Serum
4. Move working electrode over skin

⚡ product boost!

Add one of these masques over IonActive™ Serum:

- Colloidal Masque Base
- MultiVitamin Power Recovery® Masque

step-by-step instructions:

1. Cover negative electrode with damp sponge and connect to client.
2. Attach the Roller for entire face or Ball for eyes working positive electrode.
3. Apply prescribed IonActive™ Serum to client's skin. Professional masque may be applied over.
4. Contact the working positive electrode to skin. Turn the machine on and slowly increase intensity.
5. Move the working positive electrode over all of face, neck and chest.
6. When complete, turn machine down and off.
7. If masque was applied, remove excess product with warm steam towel and sponges.

tips:

- Skin should be damp with the products applied and electrode should glide easily. If more moisture is required, spritz skin with prescribed Dermalogica toner to allow for better glide.
- Do not break contact with skin while machine is on and keep electrode moving.
- Do not exceed 3 milliamps.

contraindications:

Metal implants, pacemaker, body piercings, impaired barrier, pregnant or trying to become pregnant.

ultrasonic blade

benefit: increases product penetration to help boost efficacy of products

✓ key steps

1. Apply prescribed IonActive™ Serum
2. Select penetration mode
3. Place flat side of blade at 45 degree angle
4. Perform routine

⚡ product boost!

Add one of these masques over IonActive™ Serum:

- Colloidal Masque Base
- MultiVitamin Power Recovery® Masque

step-by-step instructions:

1. Apply prescribed IonActive™ Serum to client's skin. Professional masque may be applied over IonActive™ Serum.
2. Select penetration mode and place flat side of blade at 45 degree angle. Apply using a "buttering technique."
3. Keep working hand in contact with the metal plates on both sides of the blade, while non-working hand should maintain contact with client's skin and remain within 2 inches of blade.
4. Work over the face, neck and chest, then turn device off.
5. Remove excess product with warm steam towel or sponges.

tips:

- Skin should be damp and blade should glide easily. If more moisture is required, spritz skin with prescribed toner for better glide.

contraindications:

Metal implants, pacemaker, body piercings, impaired barrier, pregnant or trying to become pregnant.

microcurrent specific iontophoresis
benefit: increases product penetration to help boost
efficacy of products

✓ key steps

1. Apply prescribed IonActive™ Serum
2. Select specific iontophoresis on positive mode
3. Perform routine small movements over the product

⚡ product boost!

Add one of these masques over IonActive Serum:

- Colloidal Masque Base
- MultiVitamin Power Recovery® Masque

step-by-step instructions:

1. Apply prescribed IonActive™ Serum to client's skin. Professional masque may be applied over IonActive™ Serum.
2. Turn modality on and select specific iontophoresis positive mode.
3. Saturate probes in toner from a cup.
4. Work over the face, neck and chest using a figure 8 or feathering movement and keep probes 2 inches apart.
5. If masque was applied, remove excess product with warm steam towel or sponges.

tips:

- Skin should be damp with the products applied and probes should glide easily. If more moisture is required, spritz skin with prescribed Dermalogica toner to allow for better glide.
- Select a lower setting for sensitive/thinner skin or a higher setting for more resistant/thicker skin.
- Keep probes moving.

contraindications:

Metal implants, pacemaker, body piercings, impaired barrier, pregnant or trying to become pregnant.

LED (light emitting diode)

benefit: stimulates and energizes cellular activity and each wavelength or color of light treats different skin conditions

✓ key steps

1. Apply prescribed LED-friendly products
2. Apply protective eyewear to client and yourself
3. Select desired LED light, rate and time
4. Turn machine on and position LED over client's face
5. Turn off machine when complete

LED-friendly product selections

- Hyaluronic Acid, Oligopeptide, Niacinamide IonActive™ Serums
- ExoThermal or EndoThermal Gelloid Masques
- Colloidal Masque Base

step-by-step instructions:

1. Apply appropriate LED-friendly products to client's skin.
2. Apply protective eyewear to both client and yourself.
3. Select desired LED light (red for aging skin or blue for acneic skin), rate and time.
4. Turn machine on and position LED over client's face.
5. Turn off machine when complete.
6. Remove excess product with warm steam towel or sponges.

⚠️ contraindications:

Hypersensitivity to light (photo allergy), tendency towards photo-toxic reactions, taking of photo-sensitising or photo-toxic medication, epilepsy, pregnancy, panic attacks and claustrophobia.
